

# Topic Information Outline

## Theme:

You have been tasked to create a website for a snowboarding club's (named "W.L.S." = "We Love Snowboarding") collection of public information about recreational snowboarding. The club currently has come up with a partial set of snowboarding information all in text file format (all stored in the folder named text) and some related pictures of snowboarders and equipment. The requirement is to set up a presentable site displaying the information and some of the images. You do not have to use all the text material or all the images in your web pages. The information in the text files is in paragraph format with spaces separating the paragraphs and lists.

## Content:

The site should contain at a minimum:

- A web page design layout that provides an easy way to view your selected snowboarding topics, then view the information on those topics
- A page displaying a small selection of the photos perhaps grouped by type (e.g. extreme, freestyle, freeride, carving).
- Make sure all your links work correctly.
